Topic 09

Secondary Metabolites Raven Chap. 2 (pp. 30-35)

Bring pre-washed white t-shirt to lab this week!

I. Plant Secondary Metabolites

- A. Definitions
 - 1) Secondary Metabolism-
 - 1a) Metabolite-

B. Examples

Compound	Example Source	Human Use
ALKALOIDS		
Codeine	Opium poppy	Narcotic pain relief; cough suppressant
Nicotine	Tobacco	Narcotic; stimulant
Quinine	Quinine tree	Used to treat malaria; tonic
Cocaine	Coca	Narcotic, tea, anesthetic, stimulant
PHENOLICS		
Lignin	Woody plants	Hardwood furniture & baseball bats
Tannin	Leaves, bark, acorns	Leather tanning, astringents
Salicin	Willows	Aspirin precursor
Tetrahydrocannabinol	Cannabis	Treatment for glaucoma & nausea
TERPENOIDS		
Camphor	Camphor tree	Component of medicinal oils, disinfectants
Menthol	Mints & eucalyptus	Strong aroma; cough medicines

Nicotine's Defensive Function in Nature

Anke Steppuhn, Klaus Gase, Bernd Krock, Rayko Halitschke, lan T. Baldwin Department of Molecular Ecology, Max Planck Institute for Chemical Ecology, Jena, Germany

Plants produce metabolites that directly decrease herbivore performance, and as a consequence, herbivores are selected for resistance to these metabolites. To determine whether these metabolites actually function as defenses requires measuring the performance of plants that are altered only in the production of a certain metabolite. To date, the defensive value of most plant resistance traits has not been demonstrated in nature. We transformed native tobacco (Nicotiana attenuata) with a consensus fragment of its two putrescine N-methyl transferase (pmt) genes in either antisense or inverted-repeat (IRpmt) orientations. Only the latter reduced (by greater than 95%) constitutive and inducible nicotine. With D4-nicotinic acid (NA), we demonstrate that silencing pmt inhibits nicotine production, while the excess NA dimerizes to form anatabine. Larvae of the nicotine-adapted herbivore Manduca sexta (tobacco hormworm) grew faster and, like the beetle Diabrotica undecimpunctata, preferred IRpmt plants in choice tests. When planted in their native habitat, IRpmt plants were attacked more frequently and, compared to wild-type plants, lost 3-fold more leaf area from a variety of native herbivores, of which the beet armyworm, Spodoptera exigua, and Trimerotropis spp. grasshoppers caused the most damage. These results provide strong evidence that nicotine functions as an efficient defense in nature and highlights the value of transgenic techniques for ecological research.

C. Ecology

Nicotine negatively affects function of herbivores.

Tobacco (Nicotiana tabacum)

Nicotine is a neurotoxin.

Nicotine is made in roots and transported to shoots via xylem.

Tobacco (Nicotiana tabacum)

Most potential herbivores cannot deal with nicotine.

The tobacco hornworm (a moth larva) can sequester and secrete nicotine, with some energetic cost.

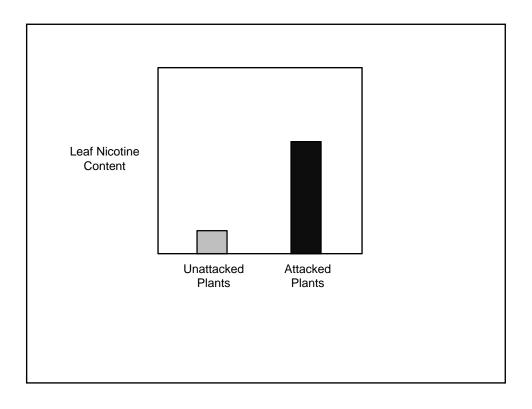

An Ecologically Motivated Analysis of Plant-Herbivore Interactions in Native Tobacco¹

Ian T. Baldwin*

Department of Molecular Ecology, Max Planck Institute for Chemical Ecology, Carl Zeiss Promenade 10, D-07745 Jena, Germany

You can't always get what you want, but if you try some time, you just might find, you get what you need. . . Mick Jagger Unfortunately, a comprehensive understanding of internal processes is not sufficient to test the cost-benefit paradigm, because Darwinian fitness can also be influenced by processes external to the plant (Fig.

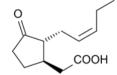

Baldwin, IT. 2001. Plant Physiology 127: 1449-1458.

Mechanism

1. Herbivory induces jasmonic acid (JA) production.

2. JA to roots, stimulates nicotine synthesis.

3. Nicotine to shoots

II. Caffeine case study

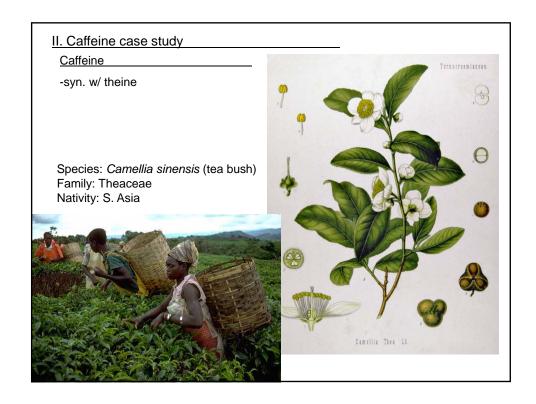

Caffeine

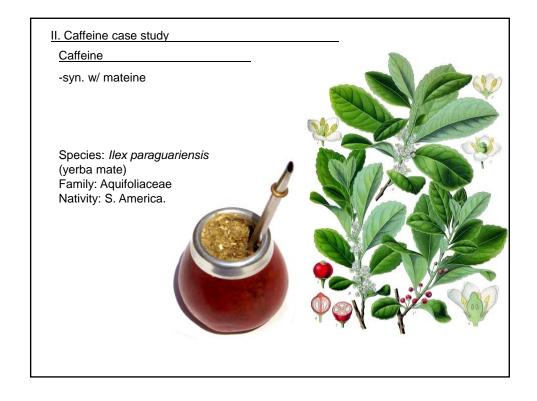

-syn. w/ guarinine

Species: *Paullinia cupana* (guarana' vine) Family: Sapindaceae

Nativity: S. America

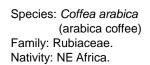

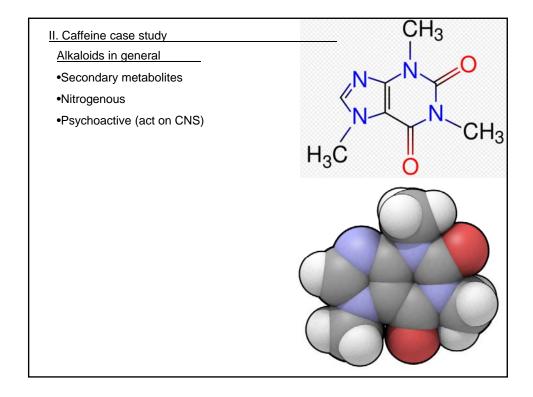

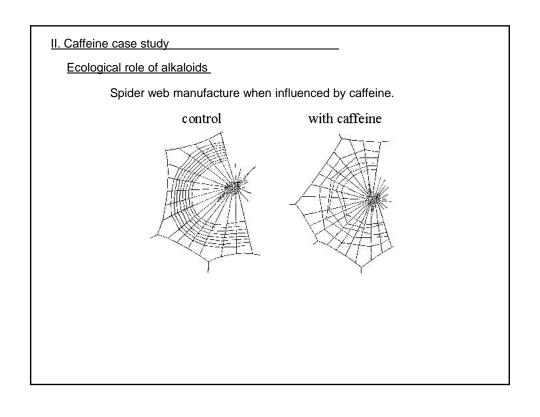

Caffeine

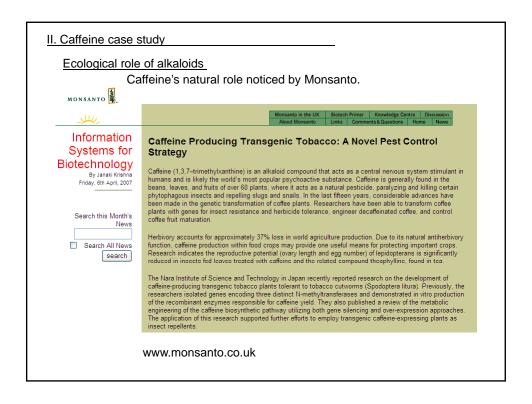

-known as caffeine (orig. *kaffein*, from German *kaffee*)

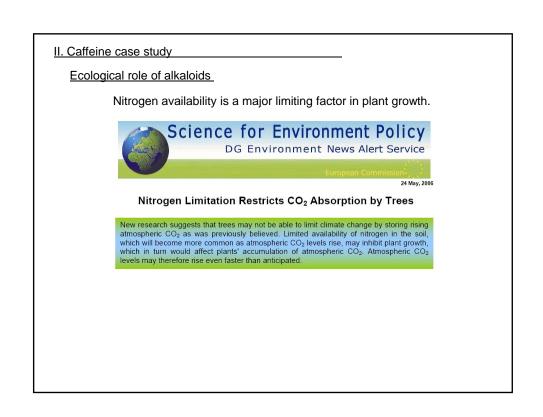

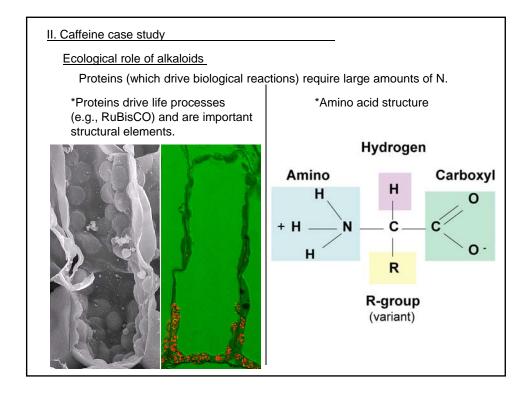

Ecological role of alkaloids *Classic alkaloid composition exemplified by caffeine CH3 N CH3 CH3

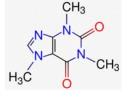

Caffeine 's effects on CNS

- •Caffeine from coffee in blood w/in 5 min
- •Stimulates heart
- •Increases stomach acidity
- •Increases urine output
- •10% rise in metabolic rate
- •Mimics feelings assoc. w/ adrenaline

caffeine

Caffeine 's effects on CNS

- •Caffeine from coffee in blood w/in 5 min
- •Stimulates heart
- •Increases stomach acidity
- •Increases urine output
- •10% rise in metabolic rate
- •Mimics feelings assoc. w/ adrenaline

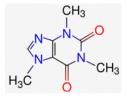

caffeine

•Excess (1 g; 10 cups) can cause anxiety, headache, dizziness, insomnia, heart palpitations, delirium, 4% lower birth weights.

•Mimics feelings assoc. w/ adrenaline

caffeine

•Excess (1 g; 10 cups) can cause anxiety, headache, dizziness, insomnia, heart palpitations, delirium, 4% lower birth weights.

•Ranks as most widely used psychoactive drug worldwide (coffee, tea, additives to soft drinks)

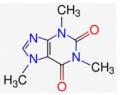

Caffeine 's effects on CNS

How?

Antagonist of adenosine.

Adenosine:

- Attaches to brain cell receptors.
- Neurotransmitter inhibitor.
- Promotes sleep
 - (accumulates in brain each waking hour).
- Suppresses arousal.

caffeine

adenosine

Caffeine and Parkinson's prevention?

What is Parkinson's Disease?

Journal of the American Medical Association, March 24, 2000

- •afflicts ca. 1-1.5 million people in the U.S., mostly 60 years +
- •no known cause and no cure, just treatments
- •symptoms of trembling arms and legs, trouble speaking, and difficulty coordinating movement
- •Loss of dopamine-secreting neurons in the midbrain substantia nigra.
- •Dopamine levels fall, and the balance between dopamine and other neurotransmitters disrupted, affecting muscular control

Caffeine and Parkinson's prevention? Honolulu Heart Program study of 8,000+ men over 30? ≥28 oz/day 20-24 oz/day 12-16 oz/day Nondrinker 0 2 4 6 8 10 12 Incidence Rate (#/10,000 person-years) Mechanism: When adenosine receptors are blocked, dopamine levels increase.

<u>Caffeine and Theobromine are similar in structure and action</u>

Table 1. Stimulant alkaloids in world's major stimulating beverages (Simpson 1986). Given in % weight. Amt. in particular beverage depends on how it is made.

Plant, part	Caffeine	Theobromine
Coffee, unroasted, dried seeds	1-1.5	
tea, dried lvs.	2.5-4.5	
Cacao, dried or fresh seeds	0.6-0.8	1.7-2.4
Kola, fresh seeds	2.0	
Guarana, dried fruit	3.0-4.5	1

Caffeine in some beverages

Table 2. Caffeine quantities in select beverages.

Drink	Caffeine (mg)
Coffee (Starbucks)	
12 oz drip	240
1 oz espresso 12 oz drip decaf	?
12 oz drip decaf	19

Caffeine in some beverages

Table 2. Caffeine quantities in select beverages.

Drink	Caffeine (mg)
Coffee (Starbucks)	
12 oz drip	240
1 oz espresso	75
12 oz drip decaf	19

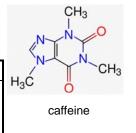

Table 6. Average caffeine content in products (most amounts from the Center for Science in the Public Interest, 2007; chocolate amounts from Simpson and

Orzogoly 1995).

<u>Product</u>	Caffeine (to the nearest mg)
Coffee (Starbucks)	
12 oz drip coffee	240
1 oz espresso	75
12 oz drip decaf coffee	19
Tea (various)	
12 oz brewed tea	80 (60-180)
12 oz Nestea	26
12 oz Snapple	14-32
Cocoa and chocolate	
(various)	
12 oz, from powder	14 (4.5-20)
1 oz baking choc	35
1 oz dark choc	20
1 oz milk choc	6
Soda (various)	
8.3 oz Red Bull	80
12 oz Jolt Cola	72
12 oz Mountain Dew	54
12 oz Dr. Pepper	42
12 oz Pepsi	38
12 oz Coca-Cola Classic	35

Coffee intro Coffee is world's second most traded commodity. Wast are the top 5 traded world commoditie?

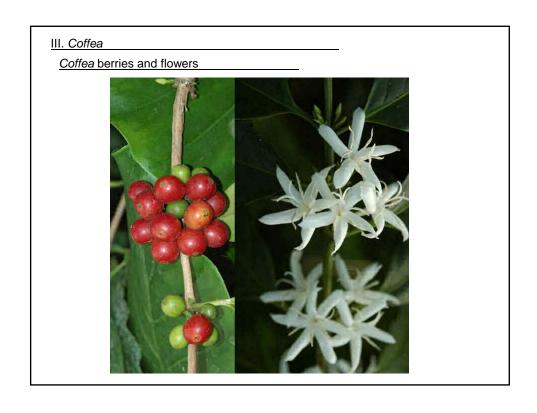

Table 3. Production of top 3 stimulant beverages.

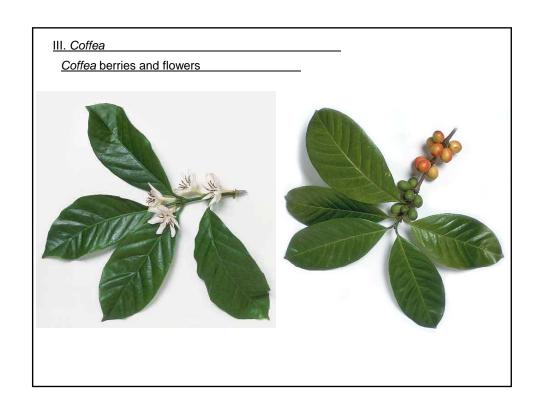

Top 3 continents		Total (MT)
Coff	ee	5,919
1.	S Amer	
2.	Africa	
3.	N & C Amer

Coffea arabica (arabica coffee)

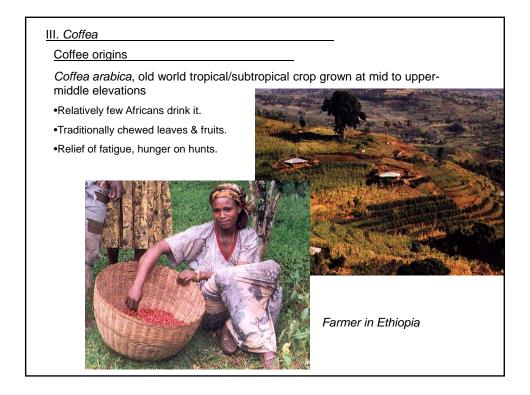

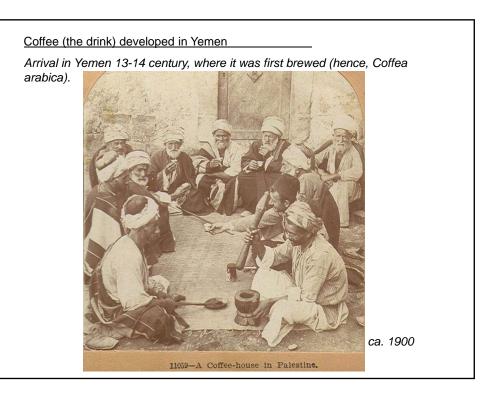

Coffee timeline

- 1. First brewed in Yemen 13-14 century (hence, Coffea arabica).
- 2. Arabia to Egypt by 1510.
- 3. To Italy & Europe by 1616.
- 4. Vienna priests threatened by "coffee culture", but Pope Clement VIII would not ban coffee.
- 5. To England by 1650 and coffee houses became important socio-politico institutions.
- 6. Europe looked to break Arabian monopoly on production. (*Arabians killed embryos in seeds before export*).
